S2230-1

THE LABOR FORCE IN IDAHO

SECTION I. THE STATE OF IDAHO
SECTION II. BY COUNTIES
SECTION III. BY MULTI-COUNTY LABOR MARKET AREAS

DEPARTMENT OF EMPLOYMENT
STATE OF IDAHO
SCOTT B. MCDONALD, DIRECTOR

Prepared by the
PLANNING, RESEARCH, AND EVALUATION BUREAU
James D. Day, Chief

CONTAINS 1976, 1977, 1978, & 1979 DATA

INTRODUCTION

On the following pages are estimates of employment, unemployment, labor force, and the unemployment rate for all counties, labor market areas, and the State of Idaho. The figures are published by month both unadjusted and adjusted for seasonal effects for years 1970 through 1979. Data for the state as a whole are published for 1960 through 1979. Current information is available on request from the Bureau of Planning, Research, And Evaluation, Department of Employment, P.O. Box 35, Boise, Idaho 83735.

Also, monthly newsletters are published for seven areas in the state and for the state as a whole each month presenting employment and unemployment data and analysis of current economic events.

DEFINITIONS

Employment comprises wage and salary workers (including domestics and other private household workers), self-employed persons, and unpaid family workers who worked 15 hours or more during the survey week in family-operated enterprises. Employment in both agricultural and nonagricultural industries is included. Also included are persons temporarily absent from work because of illness, bad weather, vacation, labor-management dispute, or because they were taking time off for various other reasons, even if they were not paid by their employers for the time off. Employed persons holding more than one job are counted only once. Commuters are shown at their place of residence and not at their place of work.

Unemployment comprises all persons who did not work during the survey week, who made specific efforts to find a job, and who were available for work during the survey week. Also included as unemployed are those who were waiting to be called back to a job from which they had been laid off.

The Civilian Labor Force comprises the total of all civilians classified as employed or unemployed in accordance with the criteria described above.

The Unemployment Rate represents the number unemployed as a percent of the civilian labor force.

Seasonal Adjustment refers to the correction of an economic time series for regularly recurring seasonal movement which can be estimated on the basis of past experience. By eliminating that part of the change which can be ascribed to usual seasonal variation, it is possible to observe the cyclical and other nonseasonal movements in the series. However, in evaluating deviations from the seasonal pattern — that is, changes in a seasonally adjusted series — it is important to note that seasonal adjustment is merely an approximation based on past experience. Seasonally adjusted estimates have a broader margin of possible error than the original data on which they are based, since they are subject not only to sampling and other errors but, in addition, are affected by the uncertainties of the seasonal adjustment process itself. In the following pages data that has been seasonally adjusted is labeled "adjusted"; raw data is labeled "unadjusted."

THE LABOR FORCE IN IDAHO

CONTAINS 1980 DATA

SEPTEMBER 1981

THE LABOR FORCE IN IDAHO

DEPARTMENT OF EMPLOYMENT
STATE OF IDAHO
SCOTT B. MCDONALD, DIRECTOR

Prepared by the
RESEARCH AND ANALYSIS BUREAU
James D. Day, Chief

CONTAINS 1980 DATA

FOREWORD

On the following pages are final employment, unemployment and labor force data, and unemployment rates for the State of Idaho and all its counties and labor market areas. The figures are published by month both unadjusted and adjusted for seasonal effects for 1980.

This issue of The Labor Force in Idaho is a supplement to the March 1980 and October 1980 issues, which contain the same information dating back to 1970. Copies of these issues and current estimates are available on request from the Research and Analysis Bureau, Idaho Department of Employment, P.O. Box 35, Boise, Idaho 83735.

Also, monthly newsletters are published for seven areas in the state and for the state as a whole each month presenting employment and unemployment data and analysis of current economic events.

DEFINITIONS

Employment comprises wage and salary workers (including domestics and other private household workers), self-employed persons, and unpaid family workers who worked 15 hours or more during the survey week in family-operated enterprises. Employment in both agricultural and nonagricultural industries is included. Also included are persons temporarily absent from work because of illness, bad weather, vacation, labor-management dispute, or because they were taking time off for various other reasons, even if they were not paid by their employers for the time off. Employed persons holding more than one job are counted only once. Commuters are shown at their place of residence and not at their place of work.

Unemployment comprises all persons who did not work during the survey week, who made specific efforts to find a job, and who were available for work during the survey week. Also included as unemployed are those who were waiting to be called back to a job from which they had been laid off.

The Civilian Labor Force comprises the total of all civilians classified as employed or unemployed in accordance with the criteria described above.

The Unemployment Rate represents the number unemployed as a percent of the civilian labor force.

Seasonal Adjustment refers to the correction of an economic time series for regularly recurring seasonal movement which can be estimated on the basis of past experience. By eliminating that part of the change which can be ascribed to usual seasonal variation it is possible to observe the cyclical and other nonseasonal movements in the series. However, in evaluationg deviations from the seasonal pattern—that is, changes in a seasonally adjusted series—it is important to note that seasonal adjustment is merely an approximation based on past experience. Seasonally adjusted estimates have a broader margin of possible error than the original data on which they are based, since they are subject not only to sampling and other errors but, in addition, are affected by the uncertainties of the seasonal adjustment process itself. In the following pages data that has been seasonally adjusted is labeled "adjusted"; raw data is labeled "unadjusted".
